1 Introduction

The autolisp-test harness drives the clautolisp runtime through a corpus of AutoLISP scenarios (control / equality / file / geometry / list / namespace / numeric / printer / reader / special-forms / string / symbol / types / variables) for behavioural conformance.

This document is a stub seeded by documentation-synchronisation.issue.
Audience: developer of the project.

2 Scope

Specifications: what autolisp-test should do.

3 Topics

- Goals and contract- Public interfaces (functions, structs, packages)- Internal invariants- Test coverage expectations- Open questions / decisions deferred

4 References

- Source code: see the subproject's `source/` directory.
- README: `README.org` in the subproject root.
- Plan / roadmap: `PLAN.md` in the subproject root.
- Sibling tracks: `autolisp-test-user-manual.org`

5 Synchronisation

Per the project-wide synchronisation rule (`AGENTS.md`, Documentation Synchronisation section), changes to the code, the `autolisp-test` specifications, this user-manual, or the man page (where applicable) must be propagated to every track.
